## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1-7 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Regarding claim 1, prior art taken either singularly or in combination fails to anticipate or fairly suggest the limitations of the dependent claims, in such manner that a rejection under 35 U.S.C 102 or 103 would be proper. The prior art fails to teach a combination of all the claimed features as presented in independent claims, which at least include a method for optically multiplexing laser light comprising the step of changing the directions of the fast axes of the light beams at different positions along the direction in which the light beams propagate as claimed.

Regarding claim 2, prior art taken either singularly or in combination fails to anticipate or fairly suggest the limitations of the dependent claims, in such manner that a rejection under 35 U.S.C 102 or 103 would be proper. The prior art fails to teach a combination of all the claimed features as presented in independent claims, which at least include a laser light multiplexing apparatus comprising a light beam rearrangement optical system for rearranging the light beams in such a manner that directions of the fast axes of the light beams are changed at different locations along the direction as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Art Unit: 2873

***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Wang et al (US 6,377,410) discloses an optical coupling system for a high power diode pumped solid state laser; and

Hurevich et al (US 6,407,870) discloses an optical beam shaper and method for spatial redistribution of inhomogeneous beam.
